PROFESSIONAL SUMMARY

Motivated Computer Science Engineering student with a focus on Data Science, seeking an entry-level opportunity to apply hands-on Python Full Stack skills and foundational knowledge in Artificial Intelligence and Data Analytics. Proven ability to complete real-world projects and internships, including hands-on experience with Python data analysis libraries such as Pandas, NumPy, and Matplotlib. Committed to continuous learning and contributing to a dynamic, results-oriented team.

TECHNICAL SKILLS

Programming: Python Full Stack

Data Analysis: Pandas, NumPy, Matplotlib

AI Knowledge: Fundamentals of Artificial Intelligence

SOFT SKILLS

Communication | Time Management | Team Collaboration | Problem Solving | Adaptability

EDUCATION

B.Tech – Computer Science Engineering (Data Science)

Sri Venkateswara College of Engineering and Technology, Chittoor, AP | GPA: 7.5 / 10 (75%)

Intermediate – MPC

Narendra Educational Institution and Defence Academy, Guntur, AP | GPA: 6.5 / 10 (65%)

Secondary School (SSC)

Srinivasa Vidyanikethan School, Thatiparthi, AP | GPA: 9.5 / 10 (95%)

EXPERIENCE

Python Programmer Intern | YBI Foundation (Remote)

- Wrote and tested Python programs covering core concepts such as object-oriented programming, file handling, and exception handling.
- Applied iterators and generators to process data efficiently across multiple Python exercises and tasks.
- Gained strong command of Python data types and produced clean, well-structured code throughout the program.

PROJECTS

Employee Management System – B.Tech Final Year Project, Chittoor | Academic Project

- Designed and developed a comprehensive Employee Management System to streamline HR operations including employee records, attendance tracking, and payroll management.
- Implemented Python-based backend with secure data handling, user authentication, and role-based access control to ensure data integrity and privacy.
- Integrated data analytics features to generate insightful reports on employee performance and attendance, enabling data-driven decision-making for management.

IPL Cricket Data Analytics | Personal Project ([GitHub](#))

- Performed end-to-end exploratory data analysis on IPL cricket match data using Python, Pandas, and NumPy, computing key performance metrics such as player strike rate and total runs.
- Applied groupby aggregations to rank top run-scorers, evaluate team performance, and analyze match win/loss trends across seasons.
- Built data visualizations using Matplotlib, including bar charts for player run totals and team win counts, and exported a consolidated analysis report to CSV.

Student Performance Analysis | Personal Project

- Analyzed student academic performance data using Python and Pandas, computing average marks across subjects and summary statistics for the dataset.
- Engineered a custom grading system (A/B/C/D) based on average scores to classify student performance.
- Visualized insights through multiple Matplotlib charts, including a bar chart of average marks, a pie chart of grade distribution, and a line chart comparing subject-wise performance.

CERTIFICATIONS

- Python Programming – YBI Foundation (Dec 2024)
- Python Full Stack – Beasant Technologies
